Experience

Karplexus, SWE Intern — June 2025 – August 2025

- Engineered an **Intelligent Log Event Triage** Assistant with Python, Docker, and OpenSearch to proactively detect, classify, and suggest responses for critical events in application logs.
- Deployed a hybrid AI engine with LLMs for autonomous log classification and suggestions.
- Developed a Slack bot and FastAPI alerting system that suggests targeted triage steps for relevant SRE teams, aiming to minimize manual investigation.

GoWarm, Developer — March 2025 – May 2025

- Tested scraper behavior against complex anti-bot controls across local and AWS environments, systematically analyzing edge cases and documenting observed failure modes.
- Implemented rotating VPN support in an AWS scraper to validate resilience under changing access conditions and anti-bot security controls.

ACM PESUECC Chapter, Member — August 2024 - Present

- Managed open-source repositories as a Maintainer for Hacknight, leading an overnight Hacktoberfest event focused on driving student contributions.
- Conducted a technical workshop on Git fundamentals, training students on core version control workflows and repository management.

PES University, Python Teaching Assistant — September 2026 - Present

- Assisted students with Python programming concepts, debugging, and problem solving.

Projects

radFS — Oct 2024

- Researched and built a memory-efficient filesystem with FUSE and Go, exploring systems-level trade-offs between space efficiency and raw performance.
- It uses Adaptive Radix Trees (ART) as its primary storage data structure to minimize worst-case memory consumption.

Bal.rs — July 2024

- A Rust-based Layer 7 load balancer with **health checks** and **fault tolerance** supporting reliable service behavior and operational monitoring.
- Utilized the **Tokio** and **Hyper** crates to achieve a 100% success rate in connections, with latencies under 200ms.

Rustbin — Nov 2024

- Built a concurrent file-sharing API in Rust with Tokio and Warp, using asynchronous multipart streaming and non-blocking file I/O.
- Implemented semaphore-based concurrency limiting, streaming data paths, and payload limits to improve resource utilization and maintain predictable behavior under load.

Education

PES University, B.Tech in Computer Science — 2023 - 2027

- CGPA: 8.3/10.0 - Semester 6
- **Coursework:** Microprocessors & Computer Architecture, DSA, Operating Systems, Computer Networks, Web Technologies, Big Data, Machine Learning, Database Management Systems, Cloud Computing, Object Oriented Analysis and Design

Skills

Programming: Rust, Python, C/C++, Go, Bash, JavaScript, Java, SQL

Tools and Platforms: Git Version Control, Linux/Unix systems, Docker, Kubernetes, AWS, gRPC, LaTeX

General: Communication, Teaching, Management, Writing
